

Remanufactured Lift Truck Parts

Remanufactured Lift Truck Parts - Forklifts are extremely costly pieces of equipment. A five thousand pound new electric unit could cost between eighteen thousand to twenty five thousand and a few thousands of dollars more will be needed for a battery and a battery charger. A similar internal combustion lift truck of similar lift capacity will cost a little less and the diesel models which are capable of heavier lifting capacities can cost upwards of one hundred thousand dollars. Reconditioned lift trucks are an alternative in order to save a great deal of money because they cost less than half the price of new models.

Some purchasers may be leery about buying a second-hand or reconditioned lift truck as they feel they will have to spend more on upkeep. Nevertheless, a properly reconditioned lift truck would be able to function just as well as a brand new one. Even though your lift will get heavy use, as long as you take good care of the equipment, it would serve your needs and likely save you a lot of cash.

When considering obtaining a second-hand forklift, it is important to ascertain what the seller means by the term reconditioned or refurbished. Lots of businesses do an excellent job of entirely making over the model previous to reselling it. This comprises disassembling the lift truck, rebuilding the engine, sandblasting the lift and after that reassembling the whole thing and finishing with a fresh coat of paint.

To properly and meticulously rebuild a forklift engine, a good company will absolutely disassemble it. A heat cleaning system can then be used to clean all the parts. Once this step has been done, all of the components are checked to see if they have any extensive wear, any defects or breakage. Particular parts like for instance crankshafts, cylinder blocks, connecting rods and cylinder heads are resized, reground and resurfaced if considered necessary. Other parts like for example bolts, gears, nuts et cetera. are replaced or repaired as considered necessary.

The engine is rebuilt by hand as soon as the overhaul has been finished. After putting it back together, a series of tests are applied to the working machine. This is done to check all of the parts to guarantee there are no problems or leaks. If any problems occur, the needed modifications are made.

There is no reason to be concerned about obtaining reconditioned forklifts from quality sellers. The process the equipments go through to be rebuilt guarantees the utmost reliability. Repairs costs could actually work out to be less in view of the fact that you will avoid the initial phase of higher maintenance projections that a brand new lift truck has as it is broken in. By following routine maintenance schedules and taking care of the equipment correctly, a reconditioned lift truck would serve you well.
